EDUCATION

New York University, Tandon School of Engineering

M.S. Management of Technology

Starting Fall 2026

B.S. Computer Science; Minor: Mathematics, Game Engineering

Sep. 2022 - May 2026

Activities: CSE Peer Mentor, Chinese Mei Society (Vice President), Theta Tau (Webmaster), SHPE, Tech@NYU, HackNYU

TECHNICAL SKILLS

Programming Languages: (Proficient) Python, (Intermediate) C/C++, (Beginner) Java, JavaScript, TypeScript, HTML/CSS

Tools/Frameworks: AWS, Git, React, FastAPI, Render, Kubernetes, Docker,, CI/CD, Agile, MATLAB

Data Analytics: MySQL, DynamoDB, Pandas, Excel, QuickSight | **Operating Systems:** Linux (Ubuntu), macOS, Windows

PROFESSIONAL EXPERIENCE

Amazon Inc. (Whole Foods) - World-Wide Grocery Tech | Systems Development Engineer Intern May 2025 - Aug. 2025

- Engineered AI-driven forecasting and anomaly detection on historical datasets, cutting investigation cycles by ~25% through **Python** scripting and **SQL** in **Athena**, while contributing to system design discussions that improved long-term data strategy
- Streamlined log pipelines for scalability and reliability, driving ~45% storage savings, ~10% latency reduction, and ~15% reliability gains by automating deltas and snapshots with **AWS Lambda**, **CDK**, **CloudWatch**, and **S3**
- Designed interactive analytics that reduced manual reporting by ~40%, by building **QuickSight** dashboards powered by **Amazon Q** natural-language queries and authoring compliance-aligned documentation for onboarding and maintainability

NYU FAS Computer and Information Technology | Student IT Support Technician

Jan. 2024 - Dec. 2025

- Managed IT assets by configuring 15+ **macOS/Windows** devices weekly, ensuring reliable performance and timely hardware replacements, by installing software, resolving technical tickets, and streamlining asset tracking for long-term planning

PROJECTS

StayPal – Smart Roommate Finder | Software Engineer

Sep. 2025 - Present

- Planned cross-platform roommate-matching app aimed at improving roommate compatibility for interns, measured by a proposed 30% increase in match accuracy, by designing an MVP architecture with React, Firebase, and PostgreSQL

Jira Service Adapter | Software Engineer

Sep. 2025 - Dec. 2025

- Implemented a Jira microservice by defining clean API design, integrating OAuth 2.0, and deploying **FastAPI** service to public cloud environment with reliable **CI/CD** integration using automated build and deployment pipelines
- Improved service stability by maintaining typed interfaces, passing all required **mypy** and **Ruff** checks, and developing unit, integration, and E2E tests that achieved 90% coverage, ensuring consistent API behavior and dependable client generation

Hustle Hub Job Board | Project Manager & Software Engineer

Jan. 2025 - Dec. 2025

- Delivered an E2E job board that expanded access to employment and financial resources, measured by 40% increase in **usability** by designing user interface and developing full-stack system in **Angular**, **Django**, **PostgreSQL**, and **FastAPI**
- Improved platform quality measured by 25% boost in accessibility and 30% reduction in task time, by implementing scalable backend architecture, documenting system workflows, and ensuring reliability through unit, integration, and E2E testing

Computer Simulation Projects | Wildfire, Urban Animal Population, Urban Travel

Jan. 2025 - May 2025

- Built **MATLAB** simulations for **wildfire** spread and **predator–prey** dynamics using probabilistic and differential-equation models, showing 30% faster burn rates with wind-aligned fronts and stable seasonal cycles in rat–cat–hawk populations
- Evaluated urban travel efficiency using **path-finding algorithms** and **route-optimization simulations** (100–1000 runs), showing that radial layouts achieved roughly 10% shorter effective travel distances than grid-based cities

Brass Bets Game | Head of Design & Engineering

Sep. 2024 - Dec. 2024

- Led creation of steampunk-themed board game using **Illustrator**, **Photoshop**, and laser-cut tools by designing 10+ components, rule systems, and box packaging, coordinating production, and delivering fully playable experience tested E2E
- Developed **marketing** strategies to improve customer penetration by running 15+ structured playtests, analyzing feedback to refine mechanics, boost engagement by 25%, and align game with target audience's preferences
